Article text

The Alphacool Eisbaer TPV Extension Set 90° offers the easiest way to connect the expandable AIO systems from Alphacool with other components. The Extension Set is compatible with all Alphacool AIO systems for processors and graphics cards.

The 12.7/7.6 mm TPV hose is 30 cm long and has a straight Alphacool TPV connection with G $\frac{1}{4}$ " 90° fitting at one end. At the other end there is a quick-release coupling with a male or female connection. The safety quick-release fasteners use a twist lock. This means that unintentional opening of the quick release fastener is almost impossible.

If you want to use the Extension Set to extend an Alphacool AIO solution with another product, you must pay attention to where you use the male and female connectors. The hose with the Male quick connector should always be mounted at the water outlet. The piece of hose with the female quick release fastener is used at the water inlet.
